

PUNITH KUMAR G P

Full Stack Software Development Engineer

Bengaluru, India | +91 8867733975 | punith5542@gmail.com | [LinkedIn](#) | [LeetCode](#)

PROFESSIONAL SUMMARY

Full Stack Software Development Engineer with **4+ years** of experience designing and shipping production systems in **React**, **Next.js**, **Node.js**, and **AWS**. Specializes in **AI-integrated platforms**, **event-driven data pipelines**, and performance optimization, with a track record of cutting API latency by **80%** and report generation time by **75%**. Strong background in **microservices**, **domain-driven design**, and cloud-native architecture at scale.

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, Java

Frontend: React.js, Next.js, Redux Toolkit, HTML5, CSS3, Tailwind CSS, Material UI

Backend: Node.js, Express.js, Spring Boot, **REST APIs**, **Microservices**, Domain-Driven Design

Cloud & DevOps: **AWS** (Lambda, Step Functions, **ECS**, S3, DynamoDB, **CloudWatch**), Azure, **Docker**, **CI/CD**, Git, GitHub

Databases: DynamoDB, MongoDB, MySQL, PostgreSQL, **OpenSearch**, Elasticsearch, Redis

Testing: Jest, Mocha, Jasmine, React Testing Library

Tools: Postman, Jira, Razorpay API

PROFESSIONAL EXPERIENCE

Software Development Engineer — Nineleaps Technologies

Apr 2025 – Present

On-site | Bengaluru, India

- Architected and delivered an **AI-powered document validation platform** using **OCR** and **OpenAI**, automating manual document verification and approval workflows end-to-end.
- Designed a database-driven **Rule Engine** with **100+ configurable validation rules**, combining prompt-based AI reasoning with deterministic business validations to improve accuracy and auditability.
- Built a scheduled **AWS Lambda** reporting pipeline generating monthly and yearly MWO reports covering applications, processing time, automated vs. manual cases, and payments, with automated email distribution to stakeholders.
- Engineered an **event-driven** reporting pipeline on **OpenSearch**, indexing **100K+ case records** to power real-time dashboards and on-demand downloadable reports.
- Reduced backend API latency **80% (15s → 3s)** through **LRU caching**, asynchronous processing, and parallel execution; cut report generation time **75% (40s → 10s)** via event-driven processing.
- Decreased **Next.js** frontend bundle size by **30%** through server-side rendering, code splitting, optimized polyfills, and selective hydration, improving page load performance.

Application Developer — IBM

Feb 2023 – Apr 2025

On-site | Bengaluru, India

- Developed enterprise-grade **React** applications using **TypeScript**, **Redux**, and **REST APIs**, delivering production features across multiple business modules in an **Agile** environment.
- Built reusable UI components and configurable frontend modules, improving development consistency and accelerating feature delivery across teams.
- Refactored legacy frontend modules, reducing technical debt by **nearly 40%** and improving long-term maintainability and code quality.
- Expanded automated frontend test coverage using **Jest** and **React Testing Library**, strengthening regression coverage and release confidence.
- Collaborated cross-functionally with backend engineers to design and integrate **REST APIs**, delivering production features through Agile development cycles.
- Led and mentored **five software engineering interns** through the delivery of a production feature from design to release.

EDUCATION

Bachelor of Engineering, Electronics and Communication Engineering

CGPA: 9.19 / 10

New Horizon College of Engineering, Bengaluru, India

AWARDS & ACHIEVEMENTS

- Solved **480+** data structures and algorithms problems on LeetCode.
- Received **9× "Feather on the Hat" Awards** and **2 Spot Awards** for engineering excellence and impact.
